Checkpoint 4 · Ideas & Selection Matrix

32 Brainstormed Concepts, Crazy 8s, SCAMPER & 2x2 Feasibility Screening | INT335

1. Summary of 32 Brainstormed Concepts Across 4 Themes

Cluster / Theme	Sample Concepts Generated	Evaluation / Triage
Theme A: Smart Campus & AI (Ideas 1–8)	AI image similarity matching, automated WhatsApp notification bot, facial recognition at gate, Bluetooth beacon tracking, campus lost heatmap.	AI trait matching selected; physical beacons rejected due to high hardware cost.
Theme B: Privacy & Verification (Ideas 9–16)	Secret identifier verification, masked phone proxies, one-time claim PINs, digital student ID authentication, anti-fraud penalty score.	Secret identifier + Masked profiles selected as core innovation.
Theme C: Physical Lockers & Dropboxes (Ideas 17–24)	Automated smart lockers at UniMall, color-coded collection bins, security checkpoint kiosks, dormitory lost desks.	Smart lockers deferred (high capex); security desk digital workflow selected.
Theme D: Gamification & Language (Ideas 25–32)	Honesty karma points, cafeteria beverage coupons, 7 Indian language localizations, voice-assisted reporting for grounds staff.	7 Regional Languages + Voice Assistance selected for total campus inclusion.

2. SCAMPER Ideation Matrix

Method	Question Asked	Resulting ReturnLoop Innovation
Substitute	What can replace public phone numbers on social media?	In-app privacy-masked messaging & secure campus security mediation.
Combine	Can we combine finder reporting with security logging?	Dual-role logging with unified QR claim slip for security desks.
Adapt	How can we adapt for non-English speaking campus staff?	Full 7-language UI localization (Hindi, Punjabi, Telugu, Tamil, etc.).
Modify	How to modify public item previews to prevent fraud?	Publicly blur photos and obscure secret identifying traits.
Put to another use	Can existing student smart ID cards be utilized?	Direct registration verification matching university database.
Eliminate	What friction can be eliminated between lectures?	Eliminate long paper logs; enable 60-second mobile report flow.
Reverse	What if finders don't search, but items find owners?	Automated 5-trait similarity matching running in background.

3. 2x2 Feasibility vs Impact Screening Matrix

Quadrant	High Feasibility (Easy to implement at ■0 cost)	Low Feasibility (High capex or campus policy hurdle)
High Impact (Solves core pain)	**WINNING CONCEPTS (SELECTED):** • **Secret Identifier Verification System** • **Automated 5-Trait Similarity Matching Engine** • **7 Indian Regional Languages Localization** • **Privacy-Preserving Masked Public Listings**	**DEFERRED CONCEPTS:** • Campus-wide automated IoT smart lockers • Bluetooth beacon tracking on all student IDs • CCTV AI video tracking integration
Low Impact (Marginal value)	• Paper lost-and-found notice board with tear-slips • Simple static PDF catalog of items	• Drone-based delivery of lost belongings across blocks • Reward cash payouts for finders
